

Suitable for BIOMETRIC sensor punch

Features & description

The BGi062 is a stand-alone desktop manual chip punching equipment for smart card industry.

- Punching system for standard 35 mm width reels
- Equipment supplied with 1 set of punching tool (hardened steel)
- Manual unrolling of the reel and positioning of the reel under the punching tool
- Step by step indexing by pins, and punching secured by manual commands
- Punching dimensions: 11.8x13mm, 10.8x13mm, 8.32x11mm, biometric sensor, others...

Advantages

- Compact and easy to use
- Used for low runs, prototypes, lab process tests, material validation like biometric sensor...
- Throughput of up to 3000 units per hour
- Used for contact chip punch (2 modules front), RFID cob (3 modules front), RFID inlays (2 modules front)
- Punching tool can be changed in few minutes to swap from one dimension to another.

Dimensions and weights

- Width: 650mm
- Depth: 300mm
- Height: 400mm
- Weight: 15kg

Facilities

- Pneumatic characteristics: 6 bars

Throughput

- Up to 3000 units/hour

Environmental conditions

- Operating temperature: +10°C to +40°C
